Introduction to Algorithms - Solutions and Instructor's Manual

I am currently reading Cormen's famous Introduction to Algorithms book. However, I do not have a resource where I can verify my solutions to the exercises. I've tried to find something on Google, but everything I find is for the 2nd edition whereas I have the 3rd. Some problems are similar, but some aren't. I'd like to have a solutions manual for this specific book.

6 CHAPTER 2. GETTING STARTED 2.1 Insertion sort on small arrays in merge sort 2.1.1 a The insertion sort can sort each sublist with length k in (k^2) worst-case time. So sorting all $n=k$ sublists could be completed in $(k^2 n=k) = (nk)$ worst-case time. 2.1.2 b Naive We could easily find a naive method. Let us try to think $n=k$ sublists as $n=k$...

Solutions to Introduction to Algorithms, 3rd edition

Solutions for Introduction to algorithms second edition Philip Bille The author of this document takes absolutely no responsibility for the contents. This is merely a vague suggestion to a solution to some of the exercises posed in the book Introduction to algorithms by Cormen, Leiserson and Rivest.

Solutions for Section 15.5 Exercise 15.5.1(a) To compute $\delta(R)$ using a "hybrid hash" approach, pick a number of buckets small enough that one entire bucket plus one block for each of the other buckets will just fit in memory. The number of buckets would be slightly larger than $B(R)/M$. On the first pass, keep all the distinct tuples of the ...
