### Codominance Worksheet

The genes for seed texture and those for seed color are on different chromosomes. A plant heterozygous for seed texture and seed color is crossed with a plant that is wrinkled and heterozygous for seed color. \*R = round, r = wrinkled, Y= yellow, y = green a. Construct a Punnett square (16 boxes) for this cross.

Name: Date: Block: Genetics Packet ~ Punnett Square Practice 11. In humans there is a disease called Phenylketonuria (PKU), caused by a recessive allele that doesn't code for the enzyme that breaks down the amino acid phenylalanine.

### Genetics Punnett Squares Practice Packet Answers ...

Genetics: Punnett Squares Practice Packet Bio Honors Most genetic traits have a stronger, dominant allele and a weaker, recessive allele. In an individual with a heterozygous genotype, the dominant allele shows up in the offspring and the recessive allele gets covered up and doesn't show; we call this complete dominance.

Incomplete dominance practice Problems. 4. Snapdragons are incompletely dominant for color; they have phenotypes red, pink, or white. The red flowers are homozygous dominant, the white flowers are homozygous recessive, and the pink flowers are heterozygous.
