My sister and I are driving south toward Graceland in her beat-up red Saturn, both in need of refuge, both running from different things. Her bumper sticker reads "Humanity Is Trying." It's a triple entendre, she explains: Humanity is exhausting. Humanity is struggle. Humanity is doing the best it knows how. Humanity Is Trying is several books in one. It's a memoir about the love and the loss of a sister and a best friend. It's the story of a series of escape attempts—cowardly, courageous, harmful, and hopeful—experiments in freedom from the stories that limit us. And it's a record of spiritual, intellectual, and emotional growth with the help of friends, psychedelics, art, and spiritual practice. From Jason Gots, creator of the podcasts Think Again and Clever Creature, comes a philosophical love letter to the slow, messy work of building a life and living with your dreams in the face of reality.

Virtual Clinical Excursions (Phase 2) is a workbook/CD-ROM package that guides the student through a multi-floor virtual hospital in a hands-on learning experience. The student is actively engaged with the workbook, CD-ROM and parent text throughout

each lesson. Each lesson has a core textbook reading assignment and activities based on "visiting" the patients in the hospital. Information resources include: charts, medical administration records, electronic patient records, video streaming of patient dialogue with nurses and other related materials. These resources provide an opportunity for the student to assess and analyze information, make a diagnosis, set priorities and implement and evaluate care. Includes a guided tutorial which shows students how to work with a patient in the virtual hospital · collect patient data from various sources (reports, charts, medication administration record, short video clips and audio clips of nurse-patient interactions) · record patient data · listen to a report and itemize a patient's problems and high-priority concerns · and sometimes administer medications. Requires students to use their critical thinking skills to set priorities for care, collect data, analyze and interpret data, and reach conclusions about complex problems within a health-illness transition.
